Gym Membership Enrolment & Front Desk Management

Workflow Automation using Deluge

Vanitha S

Aim

To automate the **approval and notification process** of the **Gym Membership Enrollment Form** in Zoho Creator using Deluge scripting, so that every membership request is automatically sent for review and the member is notified by email when the request is **approved or rejected**. This follows the approval-and-notification purpose of the given experiment.

2. Procedure

2.1 Creating the Approval Workflow

1. Open the **Gym Membership Enrollment & Front Desk Management** application and click the **"+"** icon.
2. Select **Workflow** and open the **Approvals** section.
3. Select Membership_Enrollment_Form.
4. Create a workflow named **Membership Approval**.
5. Set the workflow to run **Always**, so every new membership request enters the approval process.
6. Add the appropriate user as the **Approver**.

2.2 Creating the Email Notification

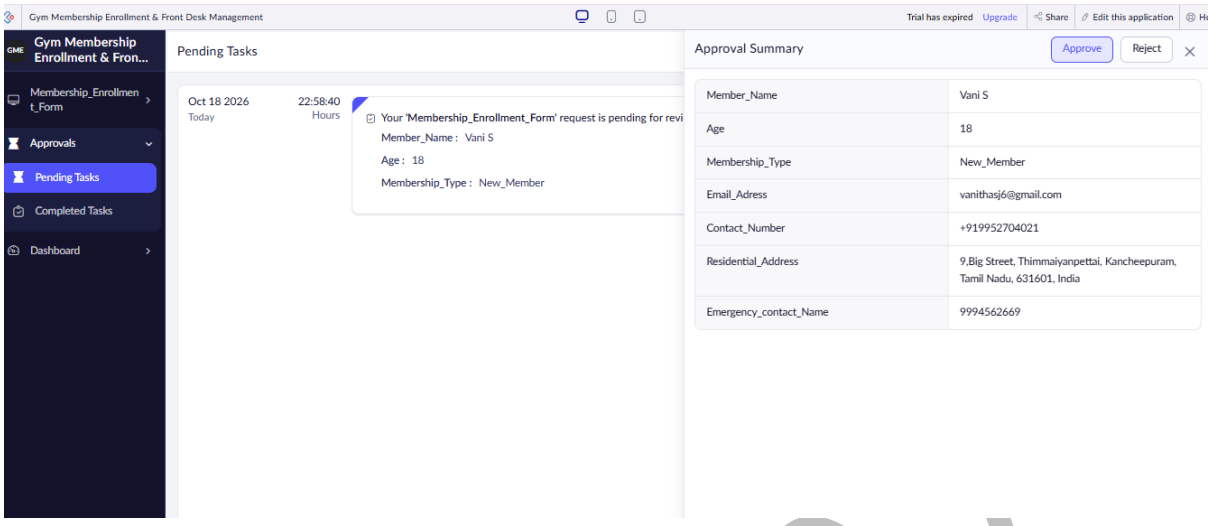

1. Add an action under the approval activity.
2. Choose **Send Email**.
3. Set **To** as ${Email_Address}.
4. For approval, use the message: **“Your gym membership request has been approved successfully.”**
5. For rejection, use: **“Your gym membership request has been rejected.”**
6. Save and enable the workflow.

The reference experiment uses an **approval activity** so the notification runs after the approval or rejection decision.

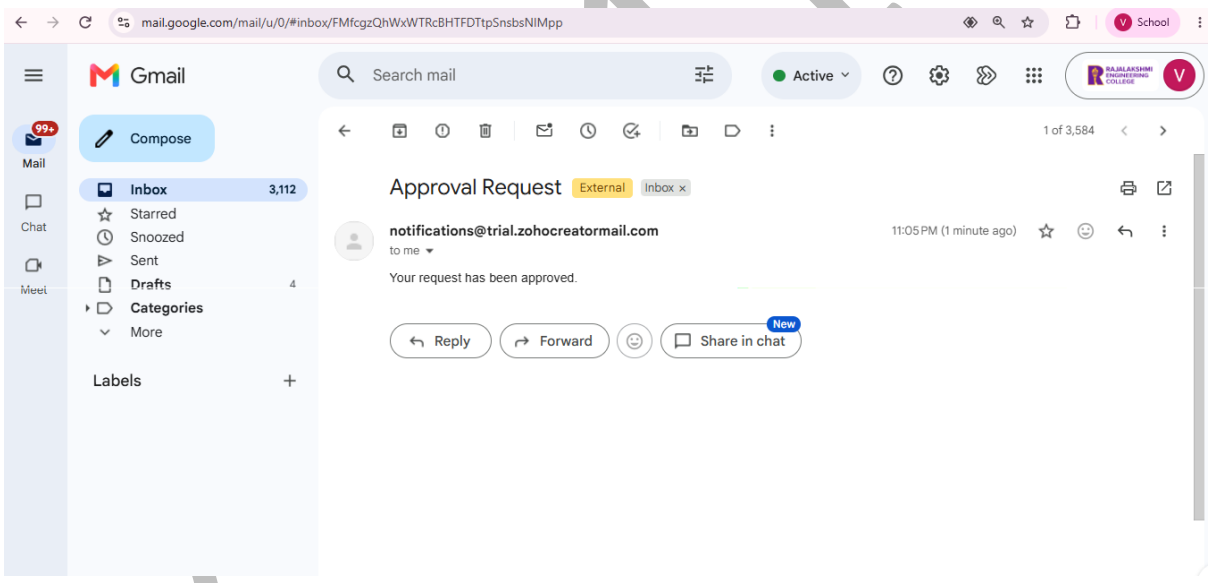

2.3 Testing the Workflow

1. Open **Access this application**.
2. Submit a **new gym membership record** with a valid email address.
3. The new request should enter **Pending Tasks**.
4. The approver reviews the request and selects **Approve** or **Reject**.
5. After the decision, the request moves to **Completed Tasks**.
6. Check the member's email inbox to verify that the notification was received.

3. Output

The submitted membership requests are automatically added to the approval process. The approver can review the requests under **Pending Tasks**, and after approval or rejection, the member receives an automatic email notification.

Result

Thus, an **approval-based workflow automation** was successfully created for the **Gym Membership Enrollment & Front Desk Management** application using Zoho Creator. New membership requests are automatically sent for review, and members are notified about their membership approval status.
